EDUCATION

Master of Computer Applications (MCA)

Chandigarh University

Jul 2022 – Jun 2024

Bachelor of Computer Applications (BCA)

Ch. Charan Singh University

Jul 2019 – Jun 2022

TECHNICAL SKILLS

Languages: PHP, JavaScript (ES6+), Python.

Frontend: HTML5, CSS3, Bootstrap, Tailwind CSS, jQuery, AJAX, React.js.

Backend: Node.js, Express.js, Laravel, FastAPI, RESTful API Development, MVC Architecture.

Databases: MySQL, MongoDB, PostgreSQL, Prisma ORM, Mongoose, SQLite, Database Optimization.

AI / ML: OpenCV, DeepFace, MediaPipe, EasyOCR, PaddleOCR, LLM Integration.

Auth & Security: JWT, Session Auth, Role-Based Access Control (RBAC), Liveness Detection, Anti-Spoofing.

Tools & Platforms: Git, GitHub, Postman, Axios, Multer, VS Code, Prisma Studio.

Concepts: Data Structures & Algorithms, OOPs, RESTful APIs, Payment Integration.

WORK EXPERIENCE

Full Stack Developer — Backup Infotech

Jul 2024 – Present

- Designed and deployed 5+ production-grade full-stack web applications using PHP, Laravel, Node.js, Express.js, and MySQL — covering features like role-based authentication, Razorpay/Stripe payment integration, dynamic dashboards, and advanced search & filter modules across diverse industry domains.
- Built and documented 10+ RESTful APIs consumed by web and mobile clients, implemented JWT-based authentication with RBAC and granular permission handling, optimised complex SQL queries and indexing strategies, and followed MVC architecture with Git-based workflows to ensure scalability, security, and clean team collaboration.

PROJECTS

AI Face Authentication & Liveness Detection System

Dec 2025 – Apr 2026

Tech Stack: Node.js, Express.js, FastAPI, PostgreSQL, Prisma, DeepFace, MediaPipe

- Built a biometric authentication system with real-time liveness detection (blink & head-movement verification) using MediaPipe to prevent replay and spoofing attacks.
- Integrated DeepFace for 128-dimension face embedding generation with cosine similarity matching, backed by secure RESTful APIs and PostgreSQL storage via Prisma ORM.

Aashi Rainwear — E-Commerce Platform

Aug 2025 – Dec 2025

Tech Stack: Flutter, PHP, Node.js, HTML5, CSS3, Bootstrap, JavaScript, MySQL

- Developed a cross-platform Flutter e-commerce app featuring product catalogue, cart management, order tracking, and payment processing backed by Node.js APIs.
- Built a responsive admin and customer-facing web interface using HTML5, CSS3, Bootstrap, and PHP with MySQL, covering inventory management and dynamic product filtering.

Nexora AI Assistant

Personal Project

Tech Stack: Python, Gradio, Groq API, Ollama, Tavily Search API

- Built an AI-powered conversational assistant with intelligent query routing and multi-model LLM support (Groq + Ollama), featuring real-time web search via Tavily Search API for accurate, up-to-date responses.

- Implemented multilingual response handling and a custom Gradio UI with streaming output, delivering an interactive experience beyond standard model training cutoffs.

AI Resume Parser

Personal Project

Tech Stack: Node.js, Express.js, FastAPI, Python, PDF Parser

- Engineered an automated resume parsing system supporting PDF and DOCX uploads, extracting and normalising candidate data — skills, experience, education, contact details — into structured JSON output for ATS ingestion.
- Designed RESTful API endpoints for upload, parse, and export workflows with robust error handling and multi-format support.

Google Photos-Style Face Grouping System

Personal Project

Tech Stack: Express.js, PostgreSQL, Prisma, DeepFace

- Built an automatic face detection and grouping engine using DeepFace similarity matching and face embedding clustering to identify individuals across a photo collection.
- Implemented smart album generation that organises images by individual identity, with face embeddings stored and queried efficiently via PostgreSQL and Prisma ORM.

OCR Document Extraction System

Personal Project

Tech Stack: FastAPI, OpenCV, EasyOCR, PaddleOCR

- Built a high-accuracy OCR pipeline for structured text extraction from scanned documents, ID cards, and invoices by combining dual OCR engines (EasyOCR + PaddleOCR).
- Applied OpenCV preprocessing techniques — deskewing and noise removal — to significantly boost recognition accuracy on low-quality and skewed images.

Radigone Web App

Dec 2024 – Jun 2025

Tech Stack: PHP, Laravel, HTML/CSS, JavaScript, MySQL

- Developed a multi-role platform (viewers, sponsors, agents) with fine-grained RBAC, permission management, transaction handling, and automated commission calculation.
- Built a comprehensive admin panel for user management, reporting, and platform oversight using Laravel MVC architecture with MySQL as the backend database.

Online Examination System

Aug 2024 – Sep 2024

Tech Stack: HTML5, CSS3, Bootstrap, JavaScript, jQuery, AJAX, PHP, Laravel, MySQL

- Built a secure full-featured online exam platform with timed tests, automatic grading, result analytics, and a robust admin panel for exam and question bank management.
- Implemented export functionality for performance reports and used AJAX for dynamic form interactions, ensuring a smooth, responsive examination experience.
